

StuckyNet-Link Hardware Recommendations for Lenders

The StuckyNet-Link software system was designed to be compatible with your existing Stucky setup.

As a lender, there are three new components you will be using to communicate with StuckyNet-Link.

Scheduler

The Scheduler is a 32-bit Active-X executable. It is best run on a dedicated workstation or server. The program has an interface, but when minimized, runs in the background like a service on an NT server.

Recommended:

- Pentium III 500MHz
- 128 MB RAM

Required:

- 32-bit Windows O/S
- Access to Stucky ABLM database
- Full permissions to shared folder within LAN
- Web access through port 443

ABLM Interface

The ABLM Interface is a standard 32-bit executable that will be installed on the same workstations running the existing Stucky ABLM software.

Recommended Hardware:

- Pentium III 500MHz
- 128 MB RAM

Required Hardware:

- 32-bit Windows O/S
- Access to Stucky ABLM database
- Full permissions to shared folder within LAN

Web Administration

The Web Administration program is browser-based, allowing lenders to administer their StuckyNet-Link website.

Recommended Hardware:

- Pentium III 500MHz
- 128 MB RAM

Required Hardware:

- 32-bit Windows O/S
- Javascript capable browser (IE6 or greater, Netscape 7 or greater)
